PURE MUU ASSURED.

For raising bread, biscuit or other food, only the very best and purest baking powder should be employed. The use of the ordinary cream of tartar, or of a baking powder containing lime, alum or phosphates, carries deleterious ingredients into the food to the prejudice of the life and health of the consumer.

The ordinary baking powder contains either lime, which, introduced into the system in too free quantities, causes serious disorders of the kidneys; alum, a corrosive poison, or phosphates, which are condemned by physicians as deleterious in their effect when taken under certain physical conditions.

The absolute purity of the Royal Baking Powder makes it pre-eminently the most useful and wholesome leavening agent known. It contains no lime, alam, phosphate or other impurity, leaves no afkaline or other residuum in the food, and its use always ensures pure, light and sweet bread, biscuit and cake, that is perfectly digestible and wholesome whether hot or cold, fresh or stale. Its leavening power has been determined the highest whenever tested by official authority, and all chemists and wrifers on food hygiene commend it for its sterling qualities.

Prof. H. A. Mott, who has examined the various baking powders for the U. S. Government, says:

"The Royal Baking Powder is undoubtedly the purest and most reliable baking powder offered to the public.
